

Vihtavuori® PRESS RELEASE

VIHTAVUORI

NEW! N555 VIHTAVUORI POWDER SOON AVAILABLE!

Vihtavuori powder, long known as the cleanest and most accurate smokeless propellant produced anywhere in the world introduces another new powder.

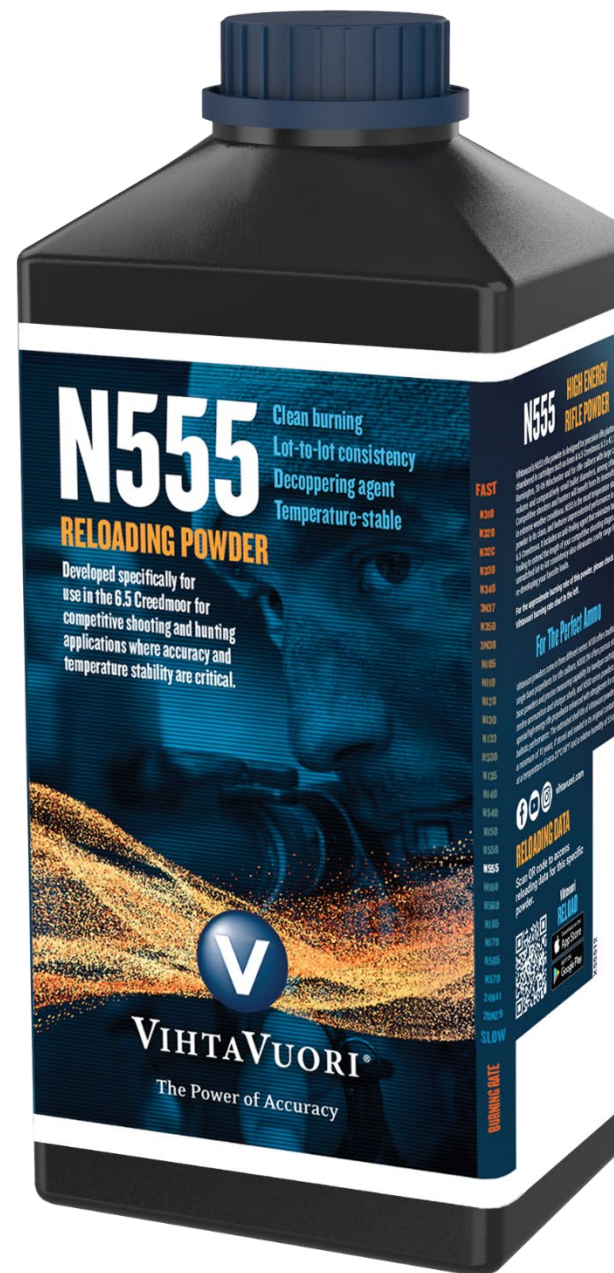

Vihtavuori's N555 rifle powder is designed for precision rifle platforms chambered in cartridges such as 6mm & 6.5 Creedmoor, .260 Remington, .284 Winchester, .30-06 Springfield and for rifle calibers with large case volume and comparatively small bullet diameters, among others. Competitive shooters and hunters will benefit from its insensitivity in extreme weather conditions. N555 is the most temperature stable powder in its class, and features unprecedented performance in the 6.5 Creedmoor. It includes an anti-fouling agent that minimizes barrel fouling to extend the length of your competitive shooting stages. Its unmatched lot-to-lot consistency also eliminates costly range time redeveloping your favorite loads.
